

PADS4 Smart Digital Communication Platform

Today NDS Global is sharing its vision by introducing Smart Digital Building as a second step towards Smart Cities tomorrow. With many years of experience in the Smart Airport (incl FIDS) and Transportation the base layer for a Smart City is a given. As of today the PADS4 Platform also caters for the Smart Digital Building, bringing the city in reach.

What is a Smart Digital Building? In a Smart Digital Building all components for the visual communication are integrated. Being it Digital Signage, Meeting Room Management, Desk Management etc. but with the remark that also the buildings sensors and infrastructure is connected so adequate analysis can be taken in order to optimize! Only then one can talk about A Digital Smart Building.

With this vision NDS has connected to some of the market leaders in the Building Management, Facility Management, Security and other suppliers. Companies like Milestone, Honeywell, Siemens, Johnson Control, Dormakaba, NEDAP and SIAMOS. They have embraced the idea and are now providing data on access control, temperature, energy usage but also license plate recognition to the PADS4 platform.

The power to support a visitor or an employee in its journey is key!

Book a desk or room from home, Welcome the guest, guide through the building but make it personal.

PADS4 has now the integrated modules for Signage, Workspace, IoT and Wayfinding to create this experience with you

About NDS Global: With over 25+ years of experience the Dutch company NDS has evolved from one of the pioneers in digital signage software into a global player of data-driven solutions with brand presence in 75+ countries. PADS4 (www.pads4.com) is known as a worldwide leading software offering a global response to dynamic display communication challenges, external or internal communication and data connectivity for signage..
